

## Expand Investigations Into & Treatments For The Causes & Symptoms of The Ebola Syndrome

What do monkeys euthanized in Alice, Texas (due to having the Ebola Syndrome) and the first human victim to die of the Ebola Syndrome in Dallas, have in common?

How can signals coming from a computer via amplifiers, Ozonated oil suppositories and cellophane wrapped colloidal silver, Vitamin E and Ozonated Hemp Oil assist in stimulating stem cells to neutralize the symptoms of a spider bite and other toxic overloads?

How is the Ebola Syndrome connected to spider bites?

The answers are as simple as they are surprising.

### The Facts

An individual experiencing the symptoms of the Ebola Syndrome exhibits a protein designated VP-35 containing damaged amino acids that are the building blocks of proteins. The degraded proteins are most often a result of enzymes called *cysteine proteases* and other external influences such as poisoning and long term dehydration by the individual.

From Wikipedia:

"Cysteine proteases are enzymes that degrade proteins."

A January 2012 abstract published by the *Journal of Virology* and titled *Filoviruses [Ebola, Corona etc] Require Endosomal Cysteine Proteases for Entry but Exhibit Distinct Protease Preferences* revealed:

"endosomal cysteine proteases [negative enzymes] are host factors for Ebola virus."

Therefore:

- The use of the word "**Entry**" in the title and the use of the word "**host**" in the text of the abstract indicates an inciting event of the Ebola Syndrome is the degrading of the amino acids to create and/or support the VP-35 protein.
- The words "Entry" and "host" exclude the Ebola & Corona Viruses as the etiology or source of the amino acid breakdown which forms the VP-35 protein.
- The words "Entry" and "'host" indicates a suitable and supportive environment has to exist before the viruses are created and travels throughout the individual.
- The words "Entry" and "host" concludes that the amino acids in the proteins of the individual had to have been damaged before the viruses appeared in the body.

The above facts declare that an organism called a virus is not the primary cause for the Ebola or Corona Syndromes. At the very least the viruses are merely symptomatic continuations of the cell degradation processes and at the very most the viruses are a peripheral secondary contributing factor to cellular and DNA dysfunction regardless if the virus is natural or has been manipulated by humans. Since the Ebola and Corona

Viruses do not cause the amino acid breakdown, what influences and factors create the VP-35 protein - an RNA suppressor?

### **Basic Biology**

Catalysts called enzyme support both positive and negative chemical reactions within all components of the human body. Enzymes are responsible for thousands of positive and negative metabolic processes that both sustain and shorten life.

Do these lethal enzymes either naturally exist in the human body or spontaneously transmute into deadly substances such as the VP-35 protein? **No**

Lethal enzymes may exist in toxins and poisons such as pesticides and may be produced as metabolites in contaminated cooking processes. The enzymes must be transmitted via various modalities into the human body. Cohabitation does not automatically mean causation. However, *toxic exposure to numerous kinds of pesticides on a single or combined basis have exactly the same symptoms exhibited by individuals suffering from the Ebola or Corona Syndromes.* This fact demands that a thorough toxic and poisonous forensic investigation be made of West Africa to determine if the cohabitation does or does not mean causation.

Negative enzymes (cysteine proteases) within spider poison turn amino acids, proteins and entire cells into a fluid mush. The liquefied cellular soup is sucked out by the spider. Whereas the spider enzymes remain localized to one area of the body and are not contagious, the toxic enzymes associated with the Ebola or Corona Syndromes are systemic and contagious. The soft tissues of the lungs are especially vulnerable to the toxic enzymes related to the Ebola Or Corona Syndromes. Are the toxins and/or poisons associated with the Ebola or Corona Syndromes truly pervasive and expansive?

### **No Speculations**

Before the year 2004 all medical and biological dictionaries *did not* contain nor define the term *immune system*. There has never been a panel of scientific and medical experts who have investigated and determined the components of an immune system in any biological entity. Therefore all interactions between poisons, toxins and viruses with an immune system are completely theoretical and scientifically unproven. This paper does not include any speculations on how an immune system and immunological responses theoretically interact with poisons, toxins and viruses. This paper only addresses the known scientific facts such as enzymes (cysteine proteases) damaging amino acids to make the VP-35 protein that provides the proper negative environment for growth of a minimally invasive and disruptive virus..

Fact - *No broken down protein such as the VP-35 equals no Ebola or Corona viruses or any organisms such as a Tuberculosis bacterium will exist in the body.*

### **Expand The Investigation.**

What toxins and/or poisons inhabit West Africa and China that cause amino acids to breakdown and become the specific VP-35 protein?

How are these unique toxins with their lethal enzymes transmitted from person to person via touch and inhalation?

The above facts, realities and questions compel governments, think tanks, foundations, media outlets, health care outlets and private citizens to expand the investigation of the Ebola & Corona Syndromes to include a thorough assessment of all chemical contaminations in West Africa and China. Teams of Hazmat cloaked scientists and journalists must scour the cities, villages, rivers, farms and especially plants of West Africa until they uncover the villain toxins and/or poisons that breakdown amino acids to create the VP-35 protein.

The condition of cysteine protease commonly occurs in plants and especially fruits. For thousands of years Megabats and a sub species called Fruit Bats have interacted with both plants, humans and animals with no complications for either the fruits or the humans and animals. Many areas of the world consume bats as a food source. Fruit Bats are now being blamed for the Ebola & Corona Syndrome but there is no hard science to back up that claim. But how did the poisonous enzymes enter into the food chain?

[http://www.science20.com/the\\_conversation/ebola\\_bats\\_get\\_a\\_bad\\_rap\\_when\\_it\\_come\\_s\\_to\\_spreading\\_diseases-147104](http://www.science20.com/the_conversation/ebola_bats_get_a_bad_rap_when_it_come_s_to_spreading_diseases-147104)

In 1996 the saturated pesticide agricultural area in and around Alice, Texas had an outbreak of Ebola at the *Texas Primate Center*, a facility on the outskirts of rural Alice that imported Macaques monkeys from the Philippines - another region also saturated in pesticides. Where did the monkeys contract the Ebola Syndrome? From the chemically saturated agricultural fields of Texas or the polluted fields and jungles of the Philippines or both? Were the monkeys exposed to Fruit Bats in the Philippines that transmitted the cysteine protease enzymes from fruits damaged by pesticides?

[http://articles.latimes.com/1996-04-23/news/mn-61751\\_1\\_texas-ebola-scare](http://articles.latimes.com/1996-04-23/news/mn-61751_1_texas-ebola-scare)

The articles linked above and other scientific texts do not address the reality that West Africa, the Philippines and most of the Earth has been saturated with pesticides and a wide variety of other poisons since the 1950s. Therefore are those toxins now complicating the interaction between fruits bats, humans and animals? Do chemicals introduced into the environment by commercial farming or other means also cause the condition of cysteine protease to occur in a wide variety of plants that are consumed as food products?

Are there other toxins besides pesticides that have been introduced into environment of West Africa? A complete chemical forensic analysis must be completed of West Africa including all properties and equipment owned by governments, corporations, cities, churches and individuals. If a corporation resists vigorous inspections then the non-cooperation must be countered with fines, public awareness and humiliation and boycotts. Governments should be encouraged to either take over or shut down corporations that will not cooperate with the critical Ebola & Corona Syndrome inspections..

For example, an American corporation that owns and operates massive rubber plantations in West Africa has spent millions of dollars setting up clinics to treat Ebola Corona Syndrome victims. Are the Ebola & Corona viruses and the dubious virus theory being used to cover-up the toxic pesticides and chemicals used to grow and process the rubber trees in Africa and crops in China?

Were the toxins and/or poisons created by happenstance such as mistakenly applying unnecessary high doses of pesticides on agricultural crops or was there purposeful contamination and an act of war on the citizens of West Africa and our species? West Africa contains a full spectrum of exploitive natural resources worth zillions of dollars. A covered boots on the ground investigation including prior vaccine campaigns, medical drugs routinely ingested, pesticides and industrial pollution will reveal these potential truths. Also are the standard diagnostic tests for Ebola of any value or worthless?

### **Proper Hydration**

Also a complete analysis should be done on the hydration habits of a large segment of the victims who died and survivors from the Ebola Syndrome in West Africa. What influence does dehydration have in the Ebola Syndrome? What were the quantities and qualities of the drinking water consumed by the victims and survivors?

Millions of lives and the liberties and freedoms of all humans are dependent upon expanding the investigation into the real causes of the Ebola & Corona Syndromes.

<http://www.dallasnews.com/news/metro/20141020-hydration-helps-nigeria-beat-ebola-outbreak.ece> - *Excellent post and a must read*

Searching for the toxins and/or poisons and dehydration habits with covered boots on the ground in West Africa will solve and negate the Ebola & Corona Syndromes. Meanwhile Virologists and scientists can continue to examine and manipulate their electron microscopes images and publish their theories and studies in peer reviewed journals while seeking to develop a savior vaccine that will probably be worthless against the enzymes of the toxins and poisons related to the Ebola Syndrome. Vaccines do not address the need for proper water hydration but actually cause dehydration.

The traditional scientific literature concludes that a wide variety of pesticides, toxins and poisons not only breakdown amino acids in proteins but also the critical nutrient of Selenium. The disruption of this key chemical element causes a cascade of failures in the human cell. Proper Hydration counter acts the Selenium disruption.

### **Common Denominator**

What is the common denominator of the Ebola infested monkeys euthanized in Alice, Texas and the first human Ebola victim that died in Dallas? Both the monkeys and the human victim had long-term exposure to lethal levels of pesticides in rural areas outside of the United States borders. Not one human or animal has died from being exposed to the monkeys and the one human Ebola victim who died in Dallas. Why?

Because the pesticide levels in the monkeys and the one human victim are at a low dose compared to the saturated agricultural fields and the poisons in their bodies were exposed to the incidental contacts, relatives and health care workers in Texas on a

short term basis. A U.S. Military expedition spent 30 days during the fall of 2014 in West Africa with uncovered boots on the ground. Of course that brief amount of time was not enough for the troops to absorb any significant level of environmental toxins to become slightly sick or die. Obviously lethal doses of pesticides that cause severe breakdowns of the amino acids in the proteins require the victims to have had long-term exposure to high amounts of pesticides and/or other environmental toxins.

The symptoms of the Ebola & Corona Syndromes are mostly identical to the symptoms of AIDS but much more severe. Was AIDS during the 1980s the result of the first wave of pesticide poisoning that started in the 1950s? As the environmental toxins and poisons continue to saturate West Africa over the decades, do the symptoms become more intense and pervasive as each generation is exposed to higher doses of toxins along with the poisons in vaccines and chronic dehydration? What is the common sense answer to that question?.

If individuals begin dying of the Ebola Syndrome in the United States, South Africa or Australia, that most likely means the victims have been exposed to high doses of pesticides and/or other toxins on a long-term basis within their respective borders. Therefore covered boots and bodies on the ground will be required in those countries to ferret out the villainous toxins and poisons.

### **Poison and Toxin History**

Like the pesticide Ebola & Corona Syndromes debacle in West Africa and China, are the toxic enzymes spewing from grotesque animal slaughter houses around the world being covered up by unjustly blaming the breakdown of human proteins and the ensuing diseases on swine and bird flu viruses? The cysteine proteases generated by the unsanitary and draconian cattle, pig and chicken processing "plants" only impact the internal organs of humans unlike the Ebola & Corona Syndromes that impact all body parts.

When the U.S. via Teddy Roosevelt took over the construction of the Panama Canal in the early 1900s, the first task was to clean out all the stagnant sewer saturated ponds and creeks that were polluted by the French. There were no sewer or sanitation systems built by the French who simply dumped all their bodily and solid waste around them in the surrounding swampy waters. For thousands of years mosquitoes landed in the clean stagnant ponds and creeks before stinging the local population and there were no diseases. When the this same dynamic played out with the poisons and toxins in the ponds and creeks being injected into the French and the local population by the contaminated mosquitoes, malaria and yellow fever flourished.

Interestingly historic books and video programs about the taming of Panamanian malaria and yellow fever during the construction of the canal do not even mention the impact of the poisoned toxic ponds and creeks and their pivotal clean-up. All of the books and video programs focus on the mosquito eradication programs by destroying the eggs and habitat of the mosquito and humans drinking a pure form of quinine water.

During the early 17th century Native South Americans introduced quinine water derived from the cinchona tree to the Jesuits who have maintained total control over the pure form of quinine that is no longer available to the general public..only a watered-down

version called tonic water is available today. What kind of impact would pure quinine water have on the symptoms and victims of the Ebola and Corona Syndromes? Ask any Jesuit to answer that pivotal question. The true poison and toxic causes of the Panamanian malaria and yellow fever, bird and swine flu, AIDS and Ebola & Corona Syndrome have been covered-up by blaming viruses and bacteria as the false culprits.

A combination of influences could have been the foundation for the Flu Pandemic of 1918. One study indicated all of the American victims had contact with relatives and friends who fought in and returned from the poisoned and toxic European battlefields of World War I. A second study indicated most of the victims were taking high doses of aspirin. So if you were taking high doses of aspirin and had exposure to a chemically saturated doughboy, did the amino acids in your proteins breakdown to lethal levels in 1918? Similar mysterious non-lethal health conditions occurred to relatives of soldiers returning from the first Iraq conflict in the early 1990s. The battlefields of Iraq were saturated with both experimental and lethal chemical and non-chemical substances and influences. Did the soldiers take those toxins home? Poisons and toxins come in all sizes, shapes and kinds with a wide variety of mild and lethal symptoms therefore the prevention and counter measures must have consistent Zen accuracy.

### **Academic Suicide**

All the abstracts and literature by traditionally trained scientists related to AIDS and the Ebola & Corona Syndromes over the past 30 years do not include the word pesticide nor the term environmental toxins and poisons. The word pathogen (the oldest and broadest sense is anything that can produce disease) has been used in titles and texts but only in general terms with no specific directions or purposes. This paper was reviewed by an adjunct professor of biology whose specialty is the development of vaccines at a prestigious institute on the West Coast of America. In the professor's oral and written replies and reviews the academic "expert" did not use the word pesticide nor the term environmental toxins and poisons nor did the individual address those issues.

Does seem the petro-chemical industry and other forces have a stranglehold on how government grants for AIDS, Ebola and Corona research are dispensed. There seems to be an unwritten rule that a government funded researcher or a scientist who wants to keep their academic job and reputation at a university or institute must stay totally focused on the false assumption of viruses being the cause of AIDS and the Ebola & Corona Syndrome. If they deviate from that narrow focus such as casually using the word pesticide even in a review of a paper about pesticides impacting the human body, they are cut off from government funding and ostracized by their peers.

This deplorable situation is just as rotten as the symptoms of AIDS and the Ebola & Corona Syndromes. Not only are the working class lands saturated with toxins and poisons but so are the hearts and minds of the intellectual crowd. The working and middle classes are duped into believing viruses are causing their diseases. Meanwhile the poisons and toxins not only saturate their farmlands but are also spewing from the mouths and texts of the traditionally educated and trained health care and scientific "experts."

## Expand The Treatments

During the last week of July 2014 I felt a pain in my right elbow. One day later I noticed that the skin on my elbow was flabby and I had severe tenderness when I pressed on the bone under the flabby area. Then the entire arm and hand swelled to three times the normal size over 24 hours. Finally a piece of necrotic (dead) skin peeled off my elbow that blew-up like a balloon. Obviously...time to take action before my arm and hand disintegrated into a pile of oozing mushy dead cells that have fallen off or had to be surgically removed.

An internet search revealed that three arachnids dominate the Southern California area - Black Widow, Wolf and Brown Recluse spiders. All my symptoms were a classic case of a high venom dose by a Brown Recluse. Had this been a snake bite, gunshot wound or trauma from a car accident then seeking help from the traditional medical community would have been more than appropriate. Again, the traditional medical community does not have a coherent and effective approach to the poisons of spider bites except worthless antibiotics and disfiguring surgery.

I was bitten on either a Friday or Saturday and by Monday I had an intense three inch wide hematoma (bruise) from the lower ulna bone near the wrist (arm bone on the same side as the pinky finger of the hand) to my armpit area. The dark area appeared as if an artist painted on a black racing stripe.

I postulated that the hematoma was caused by the toxic spider enzymes totally breaking down the amino acids in the proteins of my arm and a complete overwhelm of my lymphatic system. Also the amino acid/protein breakdown imbalanced the Potassium/Sodium interactions in the body so the cells became dominated by Sodium therefore water (swelling) became trapped around the cells. The area proximal to the small finger was very tender. Eventually these hematoma areas may have also degenerated into necrotic dead tissue that would have sloughed off or required surgical intervention.

On Sunday night I wrapped the arm and hand with an activated charcoal poultice with no change to the affected areas.

The next evening I applied the circular circuit board pads with spiral patterns and lasers of a technology named the *Stem Cell Stimulator* (SCS) to my body. Positive pulses from amplifiers carrying frequencies between 2,500 and 5,000 hertz generated by the computer are applied to the shin bones of both legs. The bone marrow produces stem cells that take on the positive charge from the computer and the amplifiers. Applicators connected to the ground outlets of the amplifiers are applied to the target area where fresh stem cells are needed. In this case the ground applicators were applied to my right arm experiencing the spider poison. A third applicator producing frequencies from 60 to 10,000 hertz was applied to assist the DNA in the stem cells to fully "turn on" to replace the dead cells.

After the SCS session I applied a layer of colloidal silver gel, a layer of vitamin E and a layer of Ozonated Hemp Oil and all items were treated in the *Tri-Vortex Technology Chamber*. <http://trivortex.com/intro.html> I wrapped the entire arm in surgical gauze that

allowed room air to interact with the Ozone Oil. There was no change in the condition when I removed the gauze four hours later. At this point, my to be wife Linda, trained in traditional medicine, was urging me to go to the emergency room of a traditional medical hospital.

### **Nope...Not Yet**

I was also trained as a photo-journalist in college, worked as a staff photographer and freelancer and I have an array of professional camera equipment. Regretfully taking pictures of my arm and hand did not even cross my consciousness. I was in total survival mode while concentrating all my time and energies on how to reverse my dire condition.

The entire incident was observed by my future wife Linda Ann Boone DVM whose resume provides a slew of doctors that can testify to her honesty and integrity related to any stated observations. I also had extra motivation to save my arm - Linda and I are to be married on October 31, 2014 and I did not want missing arm and hand parts to dampen the ceremony. I wanted to put the ring on her finger with a healthy right hand and a fully functioning right arm.

On Tuesday evening I thought my arm was going to erupt like a volcano due to the intense swelling. The only answer traditional medicine has to counter this condition is to make small incisions into the inflammation with a scalpel.

After a one-hour SCS session, I applied a layer of colloidal silver gel, a layer of vitamin E and a layer of Ozonated Hemp Oil. However, I wanted to go to sleep so rather than wrap the swollen arm and hand with surgical gauze I encapsulated the arm with cellophane. I did not want the very messy Ozone Hemp Oil to stain the bed sheets. I inserted a rectal Ozone suppository and was asleep by 11:30pm. Before going to bed I consumed at least eight ounces of *Tri-Vortex Technology* treated distilled water every 45 to 60 minutes during my entire wake time. See my booklet on proper water hydration <http://trivortex.com/booklet.html>

At 1:00am the area of the hematoma began to first itch and then felt like my arm was being lightly roasted over a campfire. I have never had such an intense sharp tingling pain in my life. Finally the pain subsided. At 3am and I took off the cellophane wrap. When I looked at my arm I thought that I was in the middle of a surreal dream.

I woke Linda and told her she had to look at my arm. As she was coming around the bed to look at my arm, she chuckled and said "Well... you are finally going to have to be treated by a real doctor." The smile on her face vanished when she looked at my arm. Linda always has an opinion on everything...something she developed over the years as an emergency room Veterinarian and an expert spay/neuter surgeon.

Linda was speechless as her mouth dropped open in silence.

***The hematoma was totally gone and my skin was a healthy pink with the swelling reduced by 85 percent! - A four-hour heal job!***

The next day small pustules that are classic symptoms of a Brown Recluse bite emerged on my wrist but disappeared within 24 hours after applying the silver/E/ozone mixture enclosed by the cellophane. After contacting numerous ozone oil retailers and manufacturers, I discovered my cellophane wrap protocol is as unique as it is effective. The above events are classic cases of combining advanced subtle energy technologies and natural remedies with advanced electronic applications.

### What Happened?

The lymphatic system was shut down, so where did the dead blood cells and toxins migrate to? I urinated and defecated my normal color, amount and smell so the O<sub>3</sub>, dead cells and toxins were not excreted via the bladder or bowel.

I postulate that because the cellophane separated the Ozone Oil from the atmospheric Oxygen, all the ingredients in my layered concoction had no choice but to interact with the **MOLECULES** of the dead cells and toxins. The *Tri-Vortex Technology Tri-Vibes* <http://trivortex.com/Tri-Vibes.html> work via a modality I named **Light Particle Assimilation** with the key component being a Phosphorous based sheath that envelopes all human, animal and plant cells. But the layered concoction worked in just the opposite manner via the Phosphorous based sheath-**Light Particle Dissemination** of the O<sub>3</sub> accompanied by the molecules of the dead blood cells and toxins into another dimensional state beyond the human senses. In other words the O<sub>3</sub> pulled the molecules of the dead blood cells and toxins into a portion of space and time via the Phosphorous sheath that cannot be detected by smell, touch or sight. Scalar waves?...probably..

However I further postulate that the final step of the migration took place beyond the skin. The burning sensation was caused by the O<sub>3</sub> and the molecules of the dead cells and toxins transporting through the pores the skin that triggered a pain sensation transported by the nerves. The final migration of the O<sub>3</sub> and the molecules of the dead cells and the toxins into another space-time dimension occurred after those entities exited the pores of the skin. The O<sub>3</sub>, dead cells and toxins could not disperse into the atmosphere because my arm and hand were wrapped in cellophane. **Light Particle Dissemination** of the dead cells and toxins via the O<sub>3</sub> transporting through the Phosphorous sheath was the only means whereby the dead cells and toxins could exit the body.

This picture details an arm in severe poison stress that is almost a duplicate of my arm after the spider bite and before the cellophane wrapped colloidal silver - vitamin E - Ozonated Hemp Oil treatment. Is this picture, downloaded from the internet, posted

on an Ebola, Corona or Brown Recluse Spider website? The answer is on page 11.

### **Proper Protocol?**

Is the proper protocol for AIDS, Ebola, Corona and other poisonous diseased conditions:

1. Repair or replace the proteins with damaged amino acids and replenish the Selenium to proper levels.
2. Drink enough water so urination turns the color of water in a toilet a slight yellow so there is enough hydration in the body to flush-out any and all viruses.
3. The fully functioning proteins, adequate Selenium levels and proper water hydration balance the Potassium/ Sodium interactions in the body so there is no water trapped around the cells.

### **Post Symptom Relief**

A watery pocket that was a remnant from the spider bite enveloped my elbow for days with no change and can remain for months or years. I developed pain in my right heel so I repeated the cellophane wrapped silver hydrosol, vitamin E and ozonated hemp oil protocol to my entire right foot and just above the ankle bone. Three applications were completed over one month period.

Within an hour after the first application small pustules began to emerge that enlarged to full boils and oozed a clear to milky liquid upon the slightest touch. The weeping boils only emerged from my Achilles Tendon to just above my heel and to the ankle bone with no boils on the remaining parts of the foot that were covered by the silver hydrosol, vitamin E and ozonated hemp oil treatment. Eventually blood excreted from the pustules but then rapidly disappeared and healed with no scarring.

After the second application 10 days later, no pustules emerged. Pustules and boils emerged again at the same location after the third treatment 10 days later and again disappeared with no scarring. The watery pocket on my elbow disappeared after the three applications and the elbow is now totally normal.

Does the cellophane wrapped silver hydrosol, vitamin E and ozonated hemp oil protocol also function as a facilitator for excreting benign excess fluid via the pores of the skin especially in the far extremities of the hands and feet? Is there a rhythm cycle to the hands/feet excretion and that is why there were no pustules after the second treatment?

### **Treating Ebola & Corona Symptoms**

Will just the Ozonated suppositories and cellophane wrapped application of colloidal silver gel, liquid Vitamin E and Ozonated Hemp Oil without the SCS have the same impact on the toxic enzymes related to the Ebola Syndrome as the concoction has on the poisonous enzymes of a spider bite? Probably yes.

I postulate the above protocol will be very effective and transition individuals to the necessary healthy state but is slightly more effective when the SCS is included with the protocol. There is only one functioning SCS unit in the world.

The inexpensive and off-the-store and internet shelf materials and the simple protocols that will cause no harm to an individual suffering from the Ebola Syndrome are available now and waiting for the opportunities.

China's answer to Ebola: a lethal haemorrhagic fever that kills 20,000 people a year

by Michael Woodhead

Like many other countries, China has gone into a hysterical spin about the threat posed by Ebola virus disease.

A reader of this article claims "the picture you show is that of a hematoma from a venipuncture where the person lifted something too heavy after giving blood or something and then developed a massive hematoma."

So why does an Ebola website use an inappropriate picture when discussing hemorrhagic fever? Does this picture really depict a symptom of the Ebola Syndrome? If not, was the posting a mistake or fraud?

The questionable picture issue is a classic example of why the Ebola Syndrome is so elusive and unsolvable to the traditional medical and scientific communities and keeps the general public in a state of confusion.
