

## Installation

1. Peel-off paper on glue side of waterproof metal tape (in envelope) with tweezers
2. Place ring around meter
3. Make sure tape nor ring touch any part of the meter

## Testing Protocols

1. Place bottle of juice or wine with small cups (plastic, glass, metal OK) 20 feet outside the structure and 100 feet beyond any **Smart Meter**. Do not put ring around electric meter.

2. Place desk lamp or any directional lamp at the opposite end of house or dwelling where the electric meter is located. (see illustration)

3. Pour samples of liquid in cups and place under lamp for one minute.
4. Return to outside of house or office with cups of liquid samples.
5. Pour additional cups and compare smell and taste of liquids exposed and not exposed to lamp. (Hint - all liquids should smell and taste the same)
6. Dispose of all cups.
7. Place ring around electric meter with ONE piece of tape.
8. Pour cups of liquid outside and place under lamp inside for one minute.
9. Return to outside of house or office with cups of liquid samples.
10. Pour additional cups and compare smell and taste of liquids exposed and not exposed to lamp.
11. Do liquids that were under lamp with ring around electric meter smell and taste smoother with no after-bite as compared to liquids from the same bottle but not placed under lamp inside the house?
12. Remove ring around electric meter and repeat smell and taste. Do the liquids smell and taste the same?
13. Place ring around electric meter with TWO pieces of waterproof metal tape while making sure ring nor tape touch any part of meter.
14. To generate empirical results, use test subjects that know nothing about the placement of the ring around the electric meter.

Clamps, screws or hoops that permanently mount the **Meter Ring** around the electric meter for security and theft prevention on the wall will not impact the **Tri-Vortex Technology** energies whatsoever.

## How Does The Ring Work?

The **Tri-Vortex Technology** balancing energies in the ring ride on top of the electricity and microwave emitted via your electric meter. When the electromagnetic and microwave fields encounter a human, animal or plant cell, the **Tri-Vortex Technology** energies override and dominate any negative aspects of the electromagnetic and microwave fields. At the same time the neutralization occurs, you body is bathed in the energies of the unique **Tri-Vibes** while simply being and living in your home or office.

The **Tri-Vortex Technology** energies **DO NOT** interfere with any normal functions related to the flow of electricity throughout your house or office nor do they interfere with the microwave signals emitted from a **Smart Meter**. The **Tri-Vortex Technology** energies **DO NOT** have a positive nor negative impact on the fees or rates levied by any utility company.

The field of the one-watt microwave emitted by a **Smart Meter** is approximately 100 feet in diameter. Tests indicate that if your neighbor's **Smart Meters** are less than 100 feet, your treated **Tri-Vibes** microwave overrides and dominates all other microwaves. However, for your neighbors health and well being, please consider introducing them to the one-of-a-kind **Tri-Vortex Technology Meter Ring** to neutralize the microwave fields emitted into their home or office. **Three Meter Rings - \$499.00**

**Tri-Vibes Pouch In Waterproof Metal Tape**

**Tri-Vibes Electric Power Meter Ring**

**Does Not Interfere With Normal Electrical Flow**

**Simple Installation**

**Neutralizes Electromagnetic & Microwave Interferences**

**Try The Smell & Taste Tests**

**Made For Both Regular Dial & Digital Smart Meters**
